# Nano Saitama Inu?

Nano Saitama Inu is a deflationary BEP-20 token built on the Binance Smart Chain that offers frictionless rewards to holders. Nano Saitama Inu is a true community project and is unlike most projects that claim to be “community driven”. This project is inspired by the community.

Our ideas and initiatives are received by a talented and dedicated project development team for evaluation, analysis, presentation to the community for voting, and functional implementation. We work as a single team with common goals. We are resilient, determined, and strong.

Nano Saitama Inu will be supporting talented individuals with limited resources to be able to compete and participate with RedBull. Nano Saitama looks to offer individuals a bright future by seeking new born talent and to offer them support through our funding.

# Our goals

- Build and sustain a strong, active, and involved community that is rewarded with an asset that increases in value.
- Implement use cases and functionality that provide measurable benefits to the crypto and digital asset community.
- Use community driven donations and fund raisers to directly support charities and organizations who are dedicated to improving the quality of life, education, awareness, and well-being of people all around the world.

# Roadmap

# Tokenomics

Max Total Supply:

- 10,000,000,000
- Burn pre-launch: 67%
- Burn on launch: 10 %

There will be a 10% tax on each buy and sell which will be split down as the following:

- 3% Liquidity
- 3% Redistributed to holder
- 4% Marketing

# How to purchase?

Nano Saitama Inu can be purchased through PancakeSwap either through your phone or computer. If you do not already have PancakeSwap on your phone then all you have to do is download it through the app store.

Once you are on PancakeSwap then enter the contract which will bring up Nano Saitama Inu.

# Contract Address

Contract Address:

0xa74a3cb7db83bf38ecdcf1ab4a4db52de2947614

Once you enter the above contract address you will be able to import NSI and buy. Recommend slippage 11%-13% (always try as low as possible)
